MECHANICS' BANE OF THE CITY OF NEW YORK.
This company is incorporated under the well devised of the State of New York, for the purpose of working for the richest gold mines in California, situated in El Decourty, where gold was first discovered. The mines aiready been opened up, the wealth of the veius particles and many thousand tons of surfferous quarter.

New England Lode. S.000 feet and 5 feet wide.
Wanderel S.000 feet and 5 feet wide.
Wanderbilt S.000 feet and 5 feet wide.
Vanderbilt S.000 feet and 5 feet wide.
S.000 feet and 3 feet wide.

neighborhood is the most beautiful in California—cook summer and almost without snow in winter. Wood abounds in plenitude on the very spot, and fuel can be delivered the mill for \$3 per cord. The Sacramento Valley Radiroad terminates at El Dorado, within a few miles of the mines, and excellent wagon and coach roads connect the locality with every portion of the country.

Of the work which has been already done on these mines the following is a summary:—On the NEW ENGLAND, at hunded or sold has been driven, which strikes the vein about \$0 feet from the top. A shaft is sunk from the top to the funnel, thus giving light and air and exposing large bodies of rich ore, several hundred tons of which are already extracted. The WANDERER has a tunnel about 300 feet long striking the vein, and a shaft meeting the tunnel, nearly ico feet deep. Some thousand tons of good ore have been taken out and dumped at the mouth of the tunnel. The VANDERERIAN has not been as much developed as the others, but a large

HOWARD HOUSE, New York, Feb. 20, 1868.

TO THE NEW YORK AND IL DORADO GOLD MINING CONFAINT.
GEFTILERS—

If you have the control of the contro

The above statement is the testimony of a gentleman who has the superintendence of a none not a thousand yards removed from those owned by the present company; to his mill thirty tons of one were taken from two of the company's lodge, the Wandstern and the New England; they were taken at three different times; the one was considered to be of an average quality. After crushing, the respective yields of the three apecimens were, \$56, \$51, and \$42, 65 per ton, although picked ere would have yielded as high as \$500 per ton. The charge which the Union Mill Company made for working this thirty tons was \$6 per ton. That all information regarding the minors owned by this company about the apple and perfect, the promoters applied to Mr. George T. Bohen, the eminent mining engineer of San Francisco, and obtained from him a report which is here annexed:

ing the inlose owned by this company should be ample and perfect, the promoters applied to Mr. George T. Boben, the eminent mining engineer of San Francisco, and obtained from him a report which is here americal.

To Captain E. H. Shaw.—

Draw Sia—At your request, I have made an examination of four quartz veins or todes containing gold, called the Vanderbilt, Vo Semite, Wanderer and New England.

El Dorado county. State of California, and distant about one mile from the celebrated. Onton Mining Company's works, which have been in successful operation for several years. They are distant from the town of El Dorado three miles, and from the town of Flacerville six miles. The position of these mines is unsurpassed by that of any other mines in the State of California. They are very covenient and easy of access, there being a good wagon road from the mines to the town of Placerville, and from thence to all parts of the surrounding country, and within one days travel of San Ernelsee. They are stuated upon a long high ridge, which is densely wooded with accellent timber, suitable for building purposes and for fuel. The timber is yellow pine, sprace, black and white all. The supply is mesthaustible. There is a valuation mill site at the foot of the ridge, where there is a never falling stream of water, and the fact mines are so situated that large mount in the stream of the could be erected on this site and office the value of the could be received in this site and office in the large mount character. These veins are well developed, having had a large amount of labor bestowed on them unore seperally the Wanderer and New England. The Wanderer has a tuned, 30 feet in length, tupping the vein, and running on the sein 10) feet. It also has an air shaft, 130 feet deep, striking the tunned. The New England has about the same amount of labor done on it. Both of those miles have worked their ore by a rude areatre, and they yielded \$40 per ton. Nuch might be said about the facerable positions of these mines. The climate is enhabrious, timber and water about and, communication, easy and cheap, to short, they rossess the local needs of good mines. The increases in thickness as you go down. On the face of the mines will, in any judgment, but we read a substant and a large amount of the wear down the received and a line reases in thickness as you go down. cool three. There are also how about three feet, and it increases in thickness as you go down. On the whole, these mines will, in my judgment, pay a very satisfactory profit upon any reasonable outlay of capital and labor upon them. An abundance of water can be obtained at all scansons of the year at these mines for running a large mill. Fuct in any quantity can be obtained at the cost of \$3 a cord, delivered at the mill. I can, therefore recommend that these mines are such as can be worked with very profitable results under proper management. The cost per ton for working these mines may briefly be summed up as follows:

Quarrying the ore, per ton.

Transportation to mill.

2 of the desired of the cost of

Total cost per ton

The foregoing estimate of the working expenses is large, bulled it to say if the work is properly managed enough hould be realized out of it to pay the interest upon the insestment. There are many gold mines working to day at a cost of less than \$4 per ton, and there is no reason why these nines should not be worked as cheap as any in the State.

All of which is respectfully submitted.

GEO, T. BOHEN.

It is the intention of the present company to commence with a forty stamp mill only, which is already ordered as San Francisco. Induce course of time it is contemplated to erect three other mills, when the profits would become enormous. Means while availing themselves of the best sources of information, the company expect in one year after their forty stamp mill is in operation to realize the following.

Say we reduce fifty tons daily. Ore, at lowest estimate,

mill, then we will double our earnings, and millent for 150 he value of our property, as we have one sufficient for 150 he value of our property, as we have one sufficient for 150. The above figures are made from the actual workings of the gold mills now at work in the immediate neighborhood of this company's mines, a report of which Prof. Silliman has this company's mines, a report of which Prof. Silliman has a sea on the Union Mine, which is only one-fourth of a miles.

PINANCIAL MANAGEMENT OF THE COMPANY.

10,000 of these shares are already subscribed for, 10,000 additional shares to the 75,000 are to be left in the

Subscription books are now open at the company's office, 106 Broadway, where samples of the ore are to be seen, and
